Data Sheet
Smart Wall Finish Coat – SW FC

Description

Different finishes can be created by using different tools such as trowels, sponges, or brushes. The art in traditional rendering is the appearance of the top coat. Different tradesmen have different finishing styles producing different textures and decorative effects. SW Finish coat is used for making thin-layer plasters on concrete substrates, traditional plasters, gypsum substrates and chipboards, gypsum cardboards, etc. We recommend the application of the SW Finish coat as facade plaster on the Smart Wall panels.

Technical Data	
Base	Acrylic based
Consumption	1.5 - 2 l/m2
Thickness	1.5 - 2 mm
VOC	nil
Drying time	3 to 4 hours
Packing	20 Litre pails
